SPEAK SO THEY STAY

Old Lessons in Public Speaking for Video, Webinars and Podcasts

Nine classic principles of public speaking, quoted from the originals and rebuilt for the internet.

GetFreeEbooks

First published 2026

Website: GetFreeEbooks.com

A Note from the Publisher

A hundred years ago, anyone who wanted to persuade a crowd had to stand up in front of one. Teachers of public speaking wrote manuals for lawyers, ministers, salesmen and nervous students, and the best of them were practical in a way that still surprises: plan the ending first, keep the introduction short, stop when you have finished.

Much of today's selling happens on camera or through a microphone, in sales videos, webinars, podcasts and recorded demos. Each chapter quotes a teacher from the early twentieth century on one principle of speaking, then shows how it applies when the audience is watching a screen and can leave with one click.

Thank you to the generations of writers, editors and volunteers who kept these works alive long enough for them to reach the public domain — and to everyone who digitised, proofread and preserved them since.

This book is published through GetFreeEbooks, a platform built on a simple idea: that good books should be easy to find, and free to read. Thank you to that community of readers and writers for giving books like this one a place to land.

Quick Start Summary

Each chapter in this book takes one principle from the old teachers of public speaking, quotes them in their own words, and translates the idea for the internet. Here is the whole book at a glance:

- **Decide the Ending First** — Write the last line first, then build the route to it. *(Still true — use it as written)*
- **Talk to the Room You Have** — Know who is watching before you choose a single word. *(Still true — use it as written)*
- **Get to the Point** — Say what the viewer gets before you say anything else. *(More important now than it was then)*
- **Let Them See the Framework** — Tell viewers the plan, then mark each step as you reach it. *(Still true — but the channel has changed)*
- **Make It Plain with Examples** — Show one real, typical example instead of three claims. *(Still true — use it as written)*
- **Speak from Notes, Not a Script** — Script only what must be exact, and speak the rest from notes. *(Still true — but the channel has changed)*
- **Sound Like Yourself** — Improve your own voice rather than borrowing someone else's. *(Still true — but the channel has changed)*
- **Nerves Go by Doing** — Record often and early; confidence follows the practice. *(Still true — use it as written)*
- **Finish, and Tell Them What to Do** — End with one action, then stop. *(Still true — but the channel has changed)*

Chapter 1: Decide the Ending First

Most people planning a talk start with how to begin. The speaking manuals of the period turned that round, and one of the best put the whole method into a single paragraph. Irvah Lester Winter set it down in *Public Speaking: Principles and Practice* (1912):

> *In considering the arrangement of a speech, the student will do well to ask himself first, not what is to be the beginning of it, but what is to be the end of it; what is the purpose of it; and what shall be the central idea; what impression, or what principal thought or thoughts, shall be left with the audience. When this is determined, then a way of working out this central idea or of working up to it—in a short speech, by a few points only—must be carefully and thoroughly planned. Extemporaneous speaking is putting spontaneously into words what has previously been well thought out and well arranged. Without this state of preparation, the way of wisdom is silence.*
>
> *— Irvah Lester Winter, Public Speaking: Principles and Practice (1912)*

What It Means Now

A webinar or sales video is usually planned slide by slide from the title onwards, which is how it ends up with forty slides and no point. Winter's order works better: write down the one thing viewers should believe or do when it ends, then choose the few steps that lead there.

For a short video that might be a single sentence written before anything else: "By the end, viewers will know how to price their first freelance job, and will book a call." Every section that does not serve that sentence comes out of the outline, however interesting it is.

Then	Now
The central idea left with the audience	The one takeaway of the video
A few points, carefully planned	Three or four sections on the outline
Without preparation, silence	No recording without an outline

In Practice: A 20-minute product webinar

Before: Planned from slide one: company history, team photos, feature list, pricing, questions.

After: Planned from the end: "Attendees can set up their first automated report, and will start a free trial." Three sections lead there, and the company history gets one sentence.

The history was not wrong. It just did nothing to get anyone to the ending.

The Verdict: Still true — use it as written

This is one of the principles that has come through the century untouched. The channel is new; the advice is not.

> ***Key Takeaway:*** *Write the last line first, then build the route to it.*

Try This

- Write one sentence saying what viewers should know or do at the end of your next video
- Cut your outline to the sections that lead to that sentence
- Say the closing line aloud before you record anything else

Chapter 2: Talk to the Room You Have

Speakers of the period addressed juries, congregations, trade conventions and village halls, sometimes in the same week. Their teachers warned that the audience decides as much about a speech as the subject does. As Clarence Stratton explained in *Public Speaking* (1920):

> *Subject and audience will determine to a large extent what kinds of words a speaker will choose. The well-equipped speaker will be master of both kinds; he will draw from either as occasion offers. He will not insult one audience by talking below their intelligence, nor will he bore another by speaking over their heads.*
>
> *— Clarence Stratton, Public Speaking (1920)*

What It Means Now

An online audience is harder to see, and no less important. A webinar for beginners and one for experienced buyers need different words, different examples and a different pace, even when the product is the same. Talking over viewers' heads loses them. Talking down to them loses them faster, because they can leave without anyone noticing.

Find out who is coming before you speak. A registration form can ask one question about experience, and the chat in the first minutes of a live session tells you more. Recorded webinars and videos need the same thinking done in advance: pick the viewer, then pick the vocabulary.

Then	Now
The tastes and temper of the hearers	Who registered, and why
Talking below their intelligence	Over-explaining to experts
Speaking over their heads	Jargon for beginners

In Practice: A bookkeeping software demo

Before: The same 30-minute demo for sole traders and for accountants, with every term explained and every menu shown.

After: Two versions. Sole traders see the three screens they will use every week; accountants get the shortcuts and the export options.

The product didn't change. The audience did, and the demo followed it.

The Verdict: Still true — use it as written

A century of new media has not dented this one. It was sound advice then, and it is sound advice now.

> ***Key Takeaway:*** *Know who is watching before you choose a single word.*

Try This

- Add one question about experience level to your webinar sign-up form
- Ask attendees in the first two minutes what they hope to learn
- List the jargon in your next script and decide which words this audience already knows

Chapter 3: Get to the Point

The long ceremonial introduction was still common in the period, full of thanks, modesty and jokes about the chairman. The practical teachers had little patience with it when the audience had come for information. Clarence Stratton described it this way in *Public Speaking* (1920):

> *Informative and argumentative introductions are quite usual. They abound in legislative bodies, business organizations, and courts of law. Having definite purposes to attain they move forward as directly and clearly as they can. In such appearances a speaker should know how to lead to his topic quickly, clearly, convincingly. Introductions should be reduced to a minimum because time is valuable. Ideas count; mere talk is worthless.*
>
> *— Clarence Stratton, Public Speaking (1920)*

What It Means Now

Online, the introduction is where most viewers decide whether to stay. A video that opens with a logo animation, a greeting and a minute of background gives a scrolling viewer every reason to move on. The hook, the first line or two, should say what the viewer will get and why it matters to them.

Live webinars have their own version of the ceremonial opening: “We’ll wait a few more minutes for people to join.” Start on time with something useful, and repeat the key point later for anyone who arrives late. The people who came on time should not be the ones who are punished.

Then	Now
The ceremonial introduction	Logo animations and long greetings
Leading to the topic quickly	The promise stated in the first seconds
Time is valuable	Viewers can leave with one click

In Practice: A baking tutorial

Before: “Hey guys, welcome back to the channel! Before we start, don’t forget to subscribe…”

After: “Your bread is dense because the dough is too cold. Here’s how to fix it in the next batch.”

The subscribe request can move to the end, where people who found the video useful are ready to hear it.

The Verdict: More important now than it was then

The stakes have risen since this was written. What was once an edge is now the minimum a reader expects.

> ***Key Takeaway:*** *Say what the viewer gets before you say anything else.*

Try This

- Watch the first fifteen seconds of your last video and cut everything before the first useful sentence
- Start your next webinar on the minute, with content
- Write your opening line so that it names the viewer’s problem

Chapter 4: Let Them See the Framework

Listeners cannot turn back a page. The teachers of speaking knew that an audience keeps a speech only if it can follow where the speech is going, and they gave that idea a test. Here is how Clarence Stratton put it in *Public Speaking* (1920):

> *A speech should have an orderly arrangement. The effect upon an audience will be more easily made, more deeply impressed, more clearly retained, if the successive steps of the development are so well marked, so plainly related, that they may be carried away in a hearer's understanding. It might be said that one test of a good speech is the vividness with which its framework is discernible. Hearers can repeat outlines of certain speeches. Those are the best. Of others they can give merely confused reports. These are the badly constructed ones.*
>
> *— Clarence Stratton, Public Speaking (1920)*

What It Means Now

Video adds tools the old speakers never had, and they all serve Stratton's test. A spoken outline at the start ("three mistakes, then the fix"), chapter markers on the video timeline and a caption for each section help the viewer keep the framework in mind.

Structure also helps the people who skip. Many viewers jump ahead to the part they need, and a video with clear chapters lets them do it without giving up. A viewer who finds the right section in ten seconds is more likely to come back for the rest than one who scrubs back and forth and quits.

Then	Now
A framework plainly discernible	A stated outline and chapter markers
Hearers who can repeat the outline	Viewers who remember the three points
Confused reports	Viewers dropping off in the middle

In Practice: A 12-minute explainer

Before: One continuous take with no stated plan, covering five topics in the order they came to mind.

After: "Three mistakes new sellers make, and what to do instead." Three chapters, each marked on the timeline and on screen.

Viewers who only have the second problem can go straight to it, and everyone knows from the start that there are only three.

The Verdict: Still true — but the channel has changed

The idea survives intact; only the tools have changed. Use the modern channel, but keep the old discipline.

> ***Key Takeaway:*** *Tell viewers the plan, then mark each step as you reach it.*

Try This

- Add timestamps or chapter markers to your longest video
- Say the outline aloud in your next video's first minute
- Put a section title on screen each time you move to a new point

Chapter 5: Make It Plain with Examples

A general statement is easy to agree with and easy to forget. The speaking manuals treated the example as a tool with rules of its own, and the rules were strict. In *Public Speaking* (1920), Clarence Stratton wrote:

> *A statement may be explained by giving examples. The speaker must be sure that his example fits the case exactly; that it is typical—that is, it must serve as a true instance of all cases under the statement, not be merely an exception; that it is perfectly clear; that it impresses the audience as unanswerable. The example may be either actual or suppositious, but it must illustrate clearly and accurately. The use of examples is a great aid in explanation.*
>
> *— Clarence Stratton, Public Speaking (1920)*

What It Means Now

On camera, the example is often the part viewers remember. “Automation saves time” slides past, while a screen recording of a twenty-minute task finished in two stays with them. The example must be typical, as Stratton said. A result that happened once, presented as normal, is the fastest way to lose a sceptical viewer.

Customer stories work the same way. One real client with a name, a business and a before-and-after figure does more than a list of benefits, and a written case study can back up what the video shows. If you can’t share a real case, say so and use a clearly labelled hypothetical rather than dressing an invented one up as fact.

Then	Now
An example that fits the case exactly	A demo of the viewer’s own task
Typical, not an exception	Honest, representative case studies
Actual or supposed	Real customers, or clearly labelled hypotheticals

In Practice: A sales video for a booking tool

Before: “Our tool saves businesses hours every week.”

After: A screen recording of a dental receptionist booking next week’s appointments, with a clock in the corner of the screen.

The viewer sees the task, the time it takes and the kind of business. They can judge the claim for themselves.

The Verdict: Still true — use it as written

Nothing essential has changed here. Move the advice onto a screen and it can be followed almost word for word.

> ***Key Takeaway:*** *Show one real, typical example instead of three claims.*

Try This

- Replace one general claim in your next video with a screen recording or demo
- Check that the result you show is typical, not your best ever
- Ask one customer whether you may tell their story on camera

Chapter 6: Speak from Notes, Not a Script

Speakers of the period argued about method: read from a manuscript, learn the speech by heart, or speak from an outline. The manual quoted here had a clear favourite, and a reason for it. Clarence Stratton made the point in *Public Speaking* (1920):

> *A speaker who has carefully written out his full speech and delivers it form the manuscript can use that speech over and over again. But that does not indicate that he really knows much about the topic he is discussing. He did know about it once. But the man who from a series of notes can reconstruct material worked up long before proves that he has retained his knowledge of it. Besides, this method gives him the chance to adapt his presentation to the changing conditions and the new audience.*
>
> *— Clarence Stratton, Public Speaking (1920)*

What It Means Now

A full script on a teleprompter gives the result Stratton described: a delivery that sounds read, with the speaker's eyes flicking across the lines. Viewers notice within seconds, even when they couldn't say what is wrong.

A short outline of five to eight lines, kept beside the camera, lets the speaker talk in their own words and still cover every point. Script the parts that must be exact, such as a price or a legal line, and speak the rest. It takes a few extra takes at first, and it sounds like a person.

Then	Now
Delivering from the manuscript	Reading from a teleprompter
Reconstructing the speech from notes	Speaking from a short outline
Adapting to the new audience	Responding to the live chat

In Practice: A product demo video

Before: A 900-word script read from a teleprompter app, eyes moving left to right.

After: Six bullet points on a card beside the lens, with only the pricing and the refund terms written out in full.

The second take ran a minute longer. It also sounded like someone who knew the product, which is what the viewer was deciding.

The Verdict: Still true — but the channel has changed

The principle holds, but it has moved house. Apply it where your readers are now, on screens and in feeds and inboxes, rather than where they were when it was written.

> ***Key Takeaway:*** *Script only what must be exact, and speak the rest from notes.*

Try This

- Turn your next script into an outline of no more than eight lines
- Mark the lines that must be word-perfect, and script only those
- Record one take from the outline and compare it with a scripted take

Chapter 7: Sound Like Yourself

Voice training in the period could turn out speakers who all sounded alike, polished and rather hollow. The better teachers pushed back and asked for a voice that stayed human. Writing in *Public Speaking: Principles and Practice* (1912), Irvah Lester Winter observed:

> *Voice and speech are largely determined by surrounding influences, and what we come to regard as natural may be only an acquired bad habit, which is, in fact, quite unnatural. Voice should certainly be what we call human. Better it should have some human faults than be smoothed out into negative perfection, without the true ring, the spunk of individuality. There is, nevertheless, a best naturalness, or second nature, and a worst. The object of training is to find the best.*
>
> *— Irvah Lester Winter, Public Speaking: Principles and Practice (1912)*

What It Means Now

Every platform has its house voice: the bright video-channel delivery, the low late-night podcast murmur, the breathless launch-video tone. Copying one is tempting, and it usually shows. Viewers trust someone who sounds like themselves on a good day more than a copy of somebody else.

Training still matters. Winter wanted a trained voice that was still the speaker's own, not whatever habit happens to feel natural. A decent microphone close to the mouth, a slower pace and a pause before each key point will fix most of what makes a voice hard to listen to, without turning it into someone else's.

Then	Now
The speaker's own voice	Your own delivery, not a platform style
Negative perfection	Over-polished, over-edited audio
The best naturalness	A close microphone, a steady pace, real pauses

In Practice: A course trailer

Before: An imitation of a well-known creator: fast cuts, shouting, "What's up, everybody!"

After: The instructor at normal volume, a little slower than conversation, pausing before the price.

The first version sounded like a thousand other trailers. The second sounded like the person the buyer would be learning from.

The Verdict: Still true — but the channel has changed

Keep the thinking and update the equipment: the tools of the period have been replaced, but the reasoning behind them has not.

> ***Key Takeaway:*** *Improve your own voice rather than borrowing someone else's.*

Try This

- Record two minutes explaining your product to a friend, and compare it with your usual video voice
- Buy or borrow a microphone that sits close to your mouth
- Mark two pauses in your next outline, just before the most important points

Chapter 8: Nerves Go by Doing

Stage fright is not new. The speaking manuals took it seriously, admitted that famous speakers suffered from it, and offered a remedy that no book could deliver on its own. Writing in *The Art of Public Speaking* (1915), J. Berg Esenwein and Dale Carnegie observed:

> *For one reason or another, some master-speakers never entirely overcome stage-fright, but it will pay you to spare no pains to conquer it. Daniel Webster failed in his first appearance and had to take his seat without finishing his speech because he was nervous. Gladstone was often troubled with self-consciousness in the beginning of an address. Beecher was always perturbed before talking in public.*
>
> *— J. Berg Esenwein and Dale Carnegie, The Art of Public Speaking (1915)*

What It Means Now

The camera has its own version of stage fright. Plenty of people who talk easily to a customer freeze when the red light comes on, and many small businesses never make a video at all because of it. Reading about it does little. Recording does the work.

Lower the stakes at first. Record short clips nobody else will see, then short clips for a small group such as existing customers, before anything public. Live streams and webinars feel harder than recordings for most beginners, so build up to them. By the tenth video, the red light has usually lost most of its power.

Then	Now
Facing an audience as often as you can	Recording short videos every week
Waiting until the fear has gone	Waiting to film until you feel ready
Master-speakers who stayed nervous	Experienced creators who still get nervous

In Practice: A consultant's first videos

Before: A plan to launch a polished video course "once I'm comfortable on camera", put off for a year.

After: A one-minute answer to a client question, recorded on a phone each Friday and sent only to existing clients for the first two months.

By the time the course was filmed, the consultant had eight weeks of practice and a folder of questions clients had really asked.

The Verdict: Still true — use it as written

This needs no translation beyond the vocabulary. Readers were people then, and they are people now.

> ***Key Takeaway:*** *Record often and early; confidence follows the practice.*

Try This

- Record a one-minute video today that nobody will see
- Send your next short video to existing customers only
- Put a weekly recording slot in your calendar

Chapter 9: Finish, and Tell Them What to Do

Endings gave the old speakers as much trouble as openings. The teachers warned against the ending that fades away, and they described the ending that asks the audience to act. Here is how Clarence Stratton put it in *Public Speaking* (1920):

> *There are some people—thoughtless, if nothing worse—who habitually end letters by adding some such expression as "Having nothing more to say, I shall now close." Is there any sense in writing such a sentence? If the letter comes only so far and the signature follows, do not those items indicate that the writer has nothing more to say and is actually closing? Why then, when a speaker has said all he has to say, should he not simply stop and sit down? Will that not indicate quite clearly that he has finished his speech? What effect would such an ending have?*
>
> *— Clarence Stratton, Public Speaking (1920)*

What It Means Now

Videos and webinars fade out in the same ways speeches did: "So, yeah, that's about it", a long thank-you, a rambling question session that ends when people drift away. The last minute is when viewers decide what to do next, and a vague ending leaves them doing nothing.

End on a single, concrete call to action, what the old manuals called the peroration: book the call, start the trial, download the checklist. Say what it is and why now, show the link, and stop. In a webinar, give the offer before the questions as well as after, because many attendees leave once the questions start.

Then	Now
The ending that trails away	"So, yeah, that's about it"
The peroration that moves the audience to act	One clear call to action at the end
Simply stop and sit down	End the video when the point is made

In Practice: The end of a sales webinar

Before: Forty minutes of content, then "Any questions?" and a slow fade as people leave.

After: At minute 38: the offer, the price, the deadline and the link in the chat, repeated after ten minutes of questions.

The people who left at the start of the questions still saw the offer. In the first version, they never did.

The Verdict: Still true — but the channel has changed

The goal is the same as it ever was; only the route to the customer has changed.

> ***Key Takeaway:*** *End with one action, then stop.*

Try This

- Write the last thirty seconds of your next video word for word
- Give your webinar's offer before the questions as well as after
- Cut any closing remarks that come after the call to action

Conclusion: Old Rules, New Screens

Of the nine principles in this book, four have survived untouched, four still hold but have moved to new channels and one matters more now than it did then. That is a remarkable record for advice written before the first website, the first search engine or the first social feed.

The reason is simple. The media have changed beyond recognition, but the people at the other end of them have not. They are still busy, still sceptical, still looking for something that will make their lives a little better — and still willing to stop for a moment when someone speaks to them clearly, honestly and about the thing they care about.

The teachers quoted here learned that lesson in front of live rooms, where a bored audience showed it at once. You can learn it faster, and test it more cheaply, than any of them could have dreamed. Start with one principle, one page and one change this week. Then come back for the next.

Your Action Plan

Work through one chapter a week. Each list below is small enough to finish in an afternoon, and each item produces something you can measure.

Week 1: Decide the Ending First

- Write one sentence saying what viewers should know or do at the end of your next video
- Cut your outline to the sections that lead to that sentence
- Say the closing line aloud before you record anything else

Week 2: Talk to the Room You Have

- Add one question about experience level to your webinar sign-up form
- Ask attendees in the first two minutes what they hope to learn
- List the jargon in your next script and decide which words this audience already knows

Week 3: Get to the Point

- Watch the first fifteen seconds of your last video and cut everything before the first useful sentence
- Start your next webinar on the minute, with content
- Write your opening line so that it names the viewer's problem

Week 4: Let Them See the Framework

- Add timestamps or chapter markers to your longest video
- Say the outline aloud in your next video's first minute
- Put a section title on screen each time you move to a new point

Week 5: Make It Plain with Examples

- Replace one general claim in your next video with a screen recording or demo
- Check that the result you show is typical, not your best ever
- Ask one customer whether you may tell their story on camera

Week 6: Speak from Notes, Not a Script

- Turn your next script into an outline of no more than eight lines
- Mark the lines that must be word-perfect, and script only those
- Record one take from the outline and compare it with a scripted take

Week 7: Sound Like Yourself

- Record two minutes explaining your product to a friend, and compare it with your usual video voice
- Buy or borrow a microphone that sits close to your mouth
- Mark two pauses in your next outline, just before the most important points

Week 8: Nerves Go by Doing

- Record a one-minute video today that nobody will see
- Send your next short video to existing customers only
- Put a weekly recording slot in your calendar

Week 9: Finish, and Tell Them What to Do

- Write the last thirty seconds of your next video word for word
- Give your webinar's offer before the questions as well as after
- Cut any closing remarks that come after the call to action

Glossary

Call to action (CTA) — The specific next step a piece of marketing asks the audience to take, such as booking, buying or signing up.

Case study — A detailed account of how one customer used a product or service and what happened as a result.

Chapter markers — Timestamps that divide a video into named sections on the playback bar.

Hook — The opening line or moment of a video or talk, designed to make the audience keep watching.

Live stream — Video broadcast in real time, often with viewers commenting as it happens.

Outline — A short list of the points in a talk, in order, used in place of a full script.

Podcast — A series of audio or video episodes that listeners can subscribe to and play when they choose.

Teleprompter — A screen near the camera lens that shows a script, so the speaker can read while appearing to look at the viewer.

Webinar — A seminar or presentation held online, live or recorded, usually with a way for viewers to ask questions.

Sources & Notes

The historical passages quoted in this book are reproduced from public domain editions of the following works. Spelling and punctuation are the original authors'; only the typography (dashes and quotation marks) has been modernised.

- Clarence Stratton, *Public Speaking* (1920)
- Irvah Lester Winter, *Public Speaking: Principles and Practice* (1912)
- J. Berg Esenwein and Dale Carnegie, *The Art of Public Speaking* (1915)

The modern commentary is editorial. It reflects general practice at the time of writing rather than the results of any single study, and platform rules and consumer-protection law change often and vary by country. Check the current rules where you trade before relying on any legal or regulatory point.

About the Publisher

GetFreeEbooks connects readers and writers around one simple idea: good books should be easy to find and free to read. Browse free, legal ebooks across every genre, join community discussions, and discover new authors — or if you're a writer yourself, connect with readers looking for exactly what you've written.
